#### **CPT II Codes**

Current Procedural Terminology Category II (CPT II) codes are additional codes that can be used to track performance from tests or procedures by giving measurable data for evaluating quality of care.

CPT II Codes are not replacements for CPT codes, they will need to be continued to be included for the services provided.

Providers will still need to include the appropriate codes for the services provided during the visit.

### Billing

CPT II codes are billed in the procedure code field, just as CPT I codes are reported.

CPT II codes do not have a fee schedule associated to them.

## Purpose of CPT Codes II for Providers

There are many reasons why a provider should use CPT II codes. For one, CPT II codes can improve member outcomes and the health of your patients.

#### Additional Benefits

Using CPT II codes allows the tracking of performance of various measures during the year to assist in finding opportunities for improvement and implement interventions in a timely manner to improve health outcomes for members.

The use of the CPT II codes assist in identifying patients in your panel who may need increased clinical management or change in their treatment plans to reach their desired health status.

Using the CPT II codes for performance measurement reduce the need for medical records for chart review and decrease the administrative burdens on the physician offices and other health care professionals.

The use of CPT II codes aid in closing Healthcare Effectiveness Data and Information Set (HEDIS) gaps in care which supports best practice.

HEDIS is a registered trademark of the National Committee for Quality Assurance (NCQA).

# CPT II Codes for Closing Certain Gaps in Gaps

The table on the next page lists CPT II codes to use to show diabetes care and blood pressure control.
